1. Within the noted timeframe, are the number of people taking out loans increasing or decreasing?
2. Has the number of people purchasing cars increased or decreased?
3. Do trends in loan approvals correlate with trends in car purchases?

Avg Loans Per Person

1

Total Loans Over 10 Year Period by Quarter

2

Avg. Loan Amount Over 10 Year Period by Quarter

3

Estimated Total People Getting Loans Over 10 Year Period by Quarter

Question: Within the noted timeframe, are the number of people taking out loans increasing or decreasing?

Analysis:

- Average loan value was adjusted to include the interest from average rates.
- The recalculated total loan amount was then divided by Combined loan amount.

Result: Estimated total number of people getting loans.

Avg Car Sales Per Person

Question: Has the number of people purchasing cars increased?

Analysis:

- Total Population weighted against Total Vehicle Sales

Result: Average Car Sales per person.

Exploring the Correlation Between Loan Approvals and Car Purchases

Question: Do trends in loan approvals correlate with trends in car purchases?

Analysis:

There is opposite correlation; one can summarize as car sales increasing, car loans are having the opposite effect.

But why?.....

Exploring the Correlation Between Loan Approvals and Car Purchases – cont.

The divergence between car buying trends and auto loan acquisition is likely influenced by fluctuating loan rates, with periods of increasing rates typically corresponding to a decrease in the number of people obtaining auto loans.

Conclusion

- Loan Rates
- Correlations
- Inconsistencies
